

T 8310-11/14/15/16 EN**Pneumatic Actuators up to 750v2 cm²****Type 3271 · Type 3277 for integral positioner attachment · Customer standard SAM001****Application**

Linear actuators particularly suitable for mounting on SAMSON Series 240, 250, 280, 290 and SMS Valves as well as Type 3510 Micro-flow Valves

Actuator area **120 to 750v2 cm²**
 Rated travel **7.5 to 30 mm**

The customer standard SAM001 indicates SAMSON devices that comply with the NAMUR Recommendation NE 53. After subscribing to ► NE53 newsletter, users of these devices automatically receive information on any hardware or software changes.

Special features

The Type 3271 and Type 3277 Pneumatic Actuators are diaphragm actuators with a rolling diaphragm and internal springs.

- Low overall height
- Powerful thrust at high stroking speed
- Low friction
- Various bench ranges by varying the number of springs or changing the spring compression
- No special tools required to change the bench range or reverse the direction of action (including actuator with handwheel)
- Permissible operating temperatures from -60 to +120 °C
- Direct attachment of accessories on additional yoke for Type 3277 with concealed travel pick-off

Versions

- **Type 3271 · Pneumatic actuator, 175v2, 350, 350v2, 355v2 or 750v2 cm² actuator area,**
- **Type 3277 · Pneumatic actuator for direct attachment of accessories, 175v2, 350, 350v2, 355v2 or 750v2 cm² actuator area,**
- **Type 3271-5 · Pneumatic actuator, 120 cm² actuator area,** diaphragm cases made of die-cast aluminum
- **Type 3277-5 · Pneumatic actuator for direct attachment of accessories, 120 cm² actuator area,** diaphragm cases made of die-cast aluminum

- With (optional) **travel stop**, minimum or maximum travel mechanically adjustable
- v1 construction with **clamped-in diaphragm** (actuator area specified in cm², no extra identification)
- v2 construction with **full diaphragm** (identified by "v2" in addition to the specified actuator area)
- With **hand-operated actuator (top-mounted)** (optional) · See Data Sheet ► T 8312

Further versions

- Versions for **other control media** (e.g. water) available on request
- **Type 3273 Side-mounted Handwheel** for ≥175v2 cm² actuator areas · See Data Sheet ► T 8312

Design and principle of operation

The actuators mainly consist of two diaphragm cases, a rolling diaphragm with diaphragm plate and internal springs. Several springs may be fitted into one another.

The signal pressure p_{st} creates the force $F = p_{st} \cdot A$ at the diaphragm surface A , which is opposed by the springs in the actuator. The bench range is determined by the number of actuator springs used and their compression, taking into account the rated travel. The travel H is proportional to the signal pressure p_{st} . The direction of action of the actuator stem depends on how the springs are installed in the actuator and the location of the signal pressure connection.

The v2 actuator construction has a full rolling diaphragm.

The v1 actuator construction has a clamped-in diaphragm.

The stem connector clamps connect the actuator stem with the plug stem of the valve.

The actuator stem and plug stem of the micro-flow valve are connected using a threaded stem connection.

The travel of the version with an adjustable travel stop can be permanently limited by up to 50 % in both directions (actuator stem extends or retracts).

In contrast to the construction of the Type 3271 Actuator, the Type 3277 Actuator is fitted with an additional yoke on the bottom diaphragm case. The yoke allows the direct attachment of a positioner and/or limit switch. The benefit of this design is that the travel pick-off located inside the yoke is protected against external influences. Refer to the mounting and operating instructions of the

valve accessories to be mounted for more details on their attachment and the parts required.

Direction of action

Actuators are available with the following directions of action:

- **Actuator stem extends (FA):** The springs cause the actuator stem to move to the lower end position when the diaphragm is relieved of pressure or when the supply air fails.
- **Actuator stem retracts (FE):** The springs cause the actuator stem to retract when the diaphragm is relieved of pressure or when the supply air fails.

Throttling or on/off service

The pneumatic actuators are designed for a maximum supply pressure of 6 bar when used for throttling service.

With “actuator stem extends” direction of action and travel stop, the supply pressure must not exceed the upper bench range value by more than 1.5 bar at the maximum.

The following also applies to actuators with 350 cm² actuator area:

- In on/off service, the supply pressure must be limited.
- With “actuator stem retracts” direction of action, the supply pressure must not exceed the upper bench range value by more than 3 bar at the maximum.

Bench range	Fail-safe action	Max. supply pressure
0.2 to 1.0 bar	Actuator stem retracts (FE)	4 bar
0.4 to 2.0 bar		5 bar
0.6 to 3.0 bar		6 bar

Table 1: Technical data

Actuator area in cm ²		120	175v2	350	350v2	355v2	750v2
Diaphragm		–	Full	Clamped-in	Full	Full	Full
Max. supply pressure		6 bar ¹⁾	6 bar ¹⁾	6 bar ¹⁾	6 bar ¹⁾	6 bar ¹⁾	6 bar ¹⁾
Permissible ambient temperatures with diaphragm material	NBR	-35 to +80 °C ²⁾	-35 to +90 °C ^{2,4)}	-35 to +90 °C ^{2,4)}	-35 to +90 °C ^{2,4)}	-35 to +90 °C ^{2,4)}	-35 to +90 °C ^{2,4)}
Degree of protection		IP54 ⁵⁾	IP54 ⁵⁾	IP54 ⁵⁾	IP54 ⁵⁾	IP54 ⁵⁾	IP54 ⁵⁾

¹⁾ Observe supply pressure restrictions.

²⁾ In on/off service, lowest temperature restricted to -20 °C

⁴⁾ Install vent plug (► AB 07) for temperatures below -20 °C.

⁵⁾ The pneumatic actuators do not pose any risk in the sense of the protection requirements described in EN 60529. The IP rating depends on the connecting parts used on the pressurized side and the spring chamber side of the actuator. In this case, components (vent plugs as well as valves accessories, such as solenoid valves, positioners etc.) must be used that comply with the requirements. The maximum rating that can be achieved with the standard vent plug is IP54 (► AB 07). Depending on the IP rating of the valve accessories, a maximum rating of IP66 can be achieved for an actuator with air purging of the actuator spring chamber.

¹⁾ The weights specified apply to a specific standard device configuration. Weights of other actuator configurations may differ depending on the version (material, number of actuator springs etc.).

Accessories

Swivel hoist

Large pneumatic actuators (with >355v2 cm² actuator area) have a female thread on the top diaphragm case to allow an eyebolt or swivel hoist to be screwed into it. The eyebolt can be used to vertically lift the actuator and is included in the scope of delivery. The swivel hoist is designed for setting a control valve assembly upright or for lifting the

actuator without valve. The swivel hoist can be ordered (accessories).

Actuator area in cm ²	Material number	
	Eyebolt (DIN 580)	Swivel hoist
750v2	8325-0131	8442-1017

Feedback connection (travel pick-off interface) according to DIN EN 60534-6-1

Various valve accessories according to DIN EN 60534-6-1 and NAMUR recommendation can be mounted on SAMSON control valves designed according to the modular principle (see associated valve documentation). The travel pick-off interface for these mounted devices can be ordered (accessories):

Type ... Actuator	Actuator area in cm ²	Item/material number (accessories) for

¹⁾ The customer standard SAM001 indicates SAMSON devices that comply with the NAMUR Recommendation NE 53. After subscribing to ▶ NE53 newsletter, users of these devices automatically receive information on any hardware or software changes. Separate data sheets have been created for Type 3271 and Type 3277 Pneumatic Actuators that comply with the SAM001 standard.

Information Sheet for control valves ▶ T 8000-1

Ordering text

Type ... Actuator	3271 3277 for direct attachment of accessories
Actuator area	... cm ²
Travel	... mm
Optional	Handwheel Travel stop Combined version with hand-wheel and travel stops on both sides
Bench range	... bar
Direction of action	Actuator stem extends (FA) Actuator stem retracts (FE)
Signal pressure connection	G .../... NPT
Housing material	See Table 2
Rolling diaphragm	NBR EPDM PVMQ
